- 4 **IR WINDOW**: Accepts the remote control signal of this device only.
- 5 **MENU**: Press this button to access the LCM menu system, from here EDID settings can be managed and IP system settings are displayed.
- 6 **1~8/A~H and IN/OUT**: Press the Out or In button to select the output or input mode and then press the required number button to make the selection accordingly.

For example, if outputs A~D need to be set to input 1 and outputs E~H need to be set to input 2, then the following sequence of button presses need to be performed:

Press: Out → A → B → C → D → In → 1 → Menu,  
and then press: Out → E → F → G → H → In → 2 → Menu.

*Note: If the menu button is not pressed the selection will not be changed.*

## 6.2 Rear Panel

- 1 LAN:** Connect to an active network for LAN serving and Telnet and Web GUI control (refer to Sections 6.8 and 6.9).

When the Matrix or any compatible LAN equipped receivers are connected to a network, this allows the network access (including internet access if available) to be shared between the Matrix and all connected receivers. Connect any Ethernet equipped device e.g. a Smart TV or games console to the LAN port of a receiver for that device to share the network/internet access.

**Warning: Please do not connect this port directly to the PC/Laptop as the Telnet function will not work.**
- 2 RS-232:** Connect to a PC or control system with D-Sub 9-pin cable to control the matrix with RS-232 commands (refer to Sections 6.6 and 6.7).
- 3 ALL IR OUT:** Connect an IR Blaster for IR signal transmission to the source/input location. Place the IR Blaster in direct line-of-sight of the equipment to be controlled. It will transmit all IR signals received by any IR extenders connected to the matrix or receivers.
- 4 ALL IR IN:** Connect an IR extender for IR signal reception. Ensure that remote being used is within the direct line-of-sight of the IR extender. IR signals received will be transmitted by all IR blasters connected to the matrix or receivers.
- 5 SERVICE:** Manufacturer use only.
- 6 IR OUT 1~8:** Connect to the IR blasters for IR signal transmission. Place the IR blaster in direct line-of-sight of the equipment to be controlled. It will transmit the IR signal received from IR extenders connected to the matrix or receivers according to the selected input.
- 7 IR IN 1~8:** Connect to the IR extenders for IR signal reception. Ensure that remote being used is within the direct line-of-sight of the IR extender. The IR signal will be transmitted to the selected receiver's IR OUT.

- 8 CAT5e/6/7 OUT 1~8:** Connect from these CAT outputs to the CAT input port of the receiver units with a single CAT5e/6/7 cable for HDMI Audio/ Video and IR/RS-232 control signal transmission.

**Warning: Please do not connect the CAT5e/6/7 output into the receiver's LAN port.**
- 9 HDMI IN 1~8:** Connect to the HDMI input source devices such as a DVD player or a Set-top Box with HDMI cable or DVI to HDMI cable.
- 10 DC 24V MAIN POWER:** Plug the 24 V DC power supply into the unit and connect the adaptor to an AC outlet.
- 11 PoC 24V:** Plug the 24V PoC power supply into the unit and connect the adaptor to an AC outlet. This unit provides the power supply for PoC (Power over Cable) capable receiver units.

### 6.3 Side Panel

- 1 Fan Ventilator:** These are air ventilation areas, DO NOT block these areas or cover with any object. Please allow adequate space around the unit for air to circulate.

## 6.4 Remote Control

- 1 **POWER:** Press this button to switch on the device or set it to standby mode.
- 2 **IN:** Input ports selection 1~8.
- 3 **OUT:** Output ports selection A~H.
