DisplayNote Technologies | Innovation in Collaboration

GET MORE FROM YOUR MEETINGS

Wasting time at the start of meetings searching for the right cables and connectors, or having to call IT for help?

Using Montage in meetings allows you to save time and keep everyone on the same page by letting up to 12 key contributors and decision makers fully participate, whether they're across the room or across the world. All attendees can stream what's on their devices to a main display, all at the same time and without the need to fight IT problems and struggle with cables.

At DisplayNote Technologies everything we do is to facilitate better, smarter, faster collaboration, allowing you to save time while increasing productivity.

We asked and answered the question, "How can we get everybody in a meeting collaborating more productively, drawing conclusions quicker and give them the tools to efficiently reach more informed decisions?" With its intuitive gesture-driven interface allowing full control of the meeting content and enabling full participation for all attendees, Montage lets you annotate, analyse, share and compare information from multiple sources.

Montage offers complete communication, with full-screen mirroring as well as video and voice communication for all attendees and enterprise level security encryption. Wherever you are, whatever device you're on, be in the meeting not just at the meeting.

KEY FEATURES

- Up To 12 Attendees On Screen
- Multi-Platform
- Annotate
- File Share
- 2-Way Collaboration

- Voice & Video
- Touch Screen Support
- Remote PC Control
- Join Remotely
- Enterprise Level Encryption

WORKING
TOGETHER
SHOULD
MEAN
TOGETHER

"COLLABORATION IN TEAMS OF SIX OR MORE PEOPLE GENERATES BETTER IDEAS AND CONCEPTS."

Why collaboration leads to higher impact innovations. Nielsen 2015

Meeting attendees can utilise the native communication tools to show both their device/desktop screens and their camera feeds simultaneously – together with voice integration, meetings with those out-of-the-room have never had more potential to see and be seen, hear and be heard.

Sometimes it's easy to see the content but completely miss the context… the reality of modern working is that those you're working with may be across the room or across the world. Uniting people into one cohesive team and eliminating any blockers to the flow of ideas and any chance of misunderstanding or misinterpretation is key to achieving every organisation's goals. With everyone's screen and content right in front of you, it's easier to see the big picture and make better informed decisions.

SAVE TIME & INCREASE PRODUCTIVITY

Wouldn't it be great if meetings didn't begin with a hunt for the right cables...

Wirelessly connect up to 12 attendees on a main meeting room display fast and efficiently – it's as simple as connecting to your Wi-Fi. Any attendee can bring their content to the fore with a simple click or swipe. 'Passing presenter control' becomes a thing of the past as everyone's contribution is available as and when it's required. Stop fighting IT problems: Montage fades into the background of the meeting. With file sharing and annotation capabilities, the meeting actually ends when the meeting ends – eliminating follow up reporting, note taking and updated content distribution.

ACROSS THE ROOM OR ACROSS THE WORLD

Wouldn't it be great if you could save on travel costs and bring everyone to the meeting that you needed...
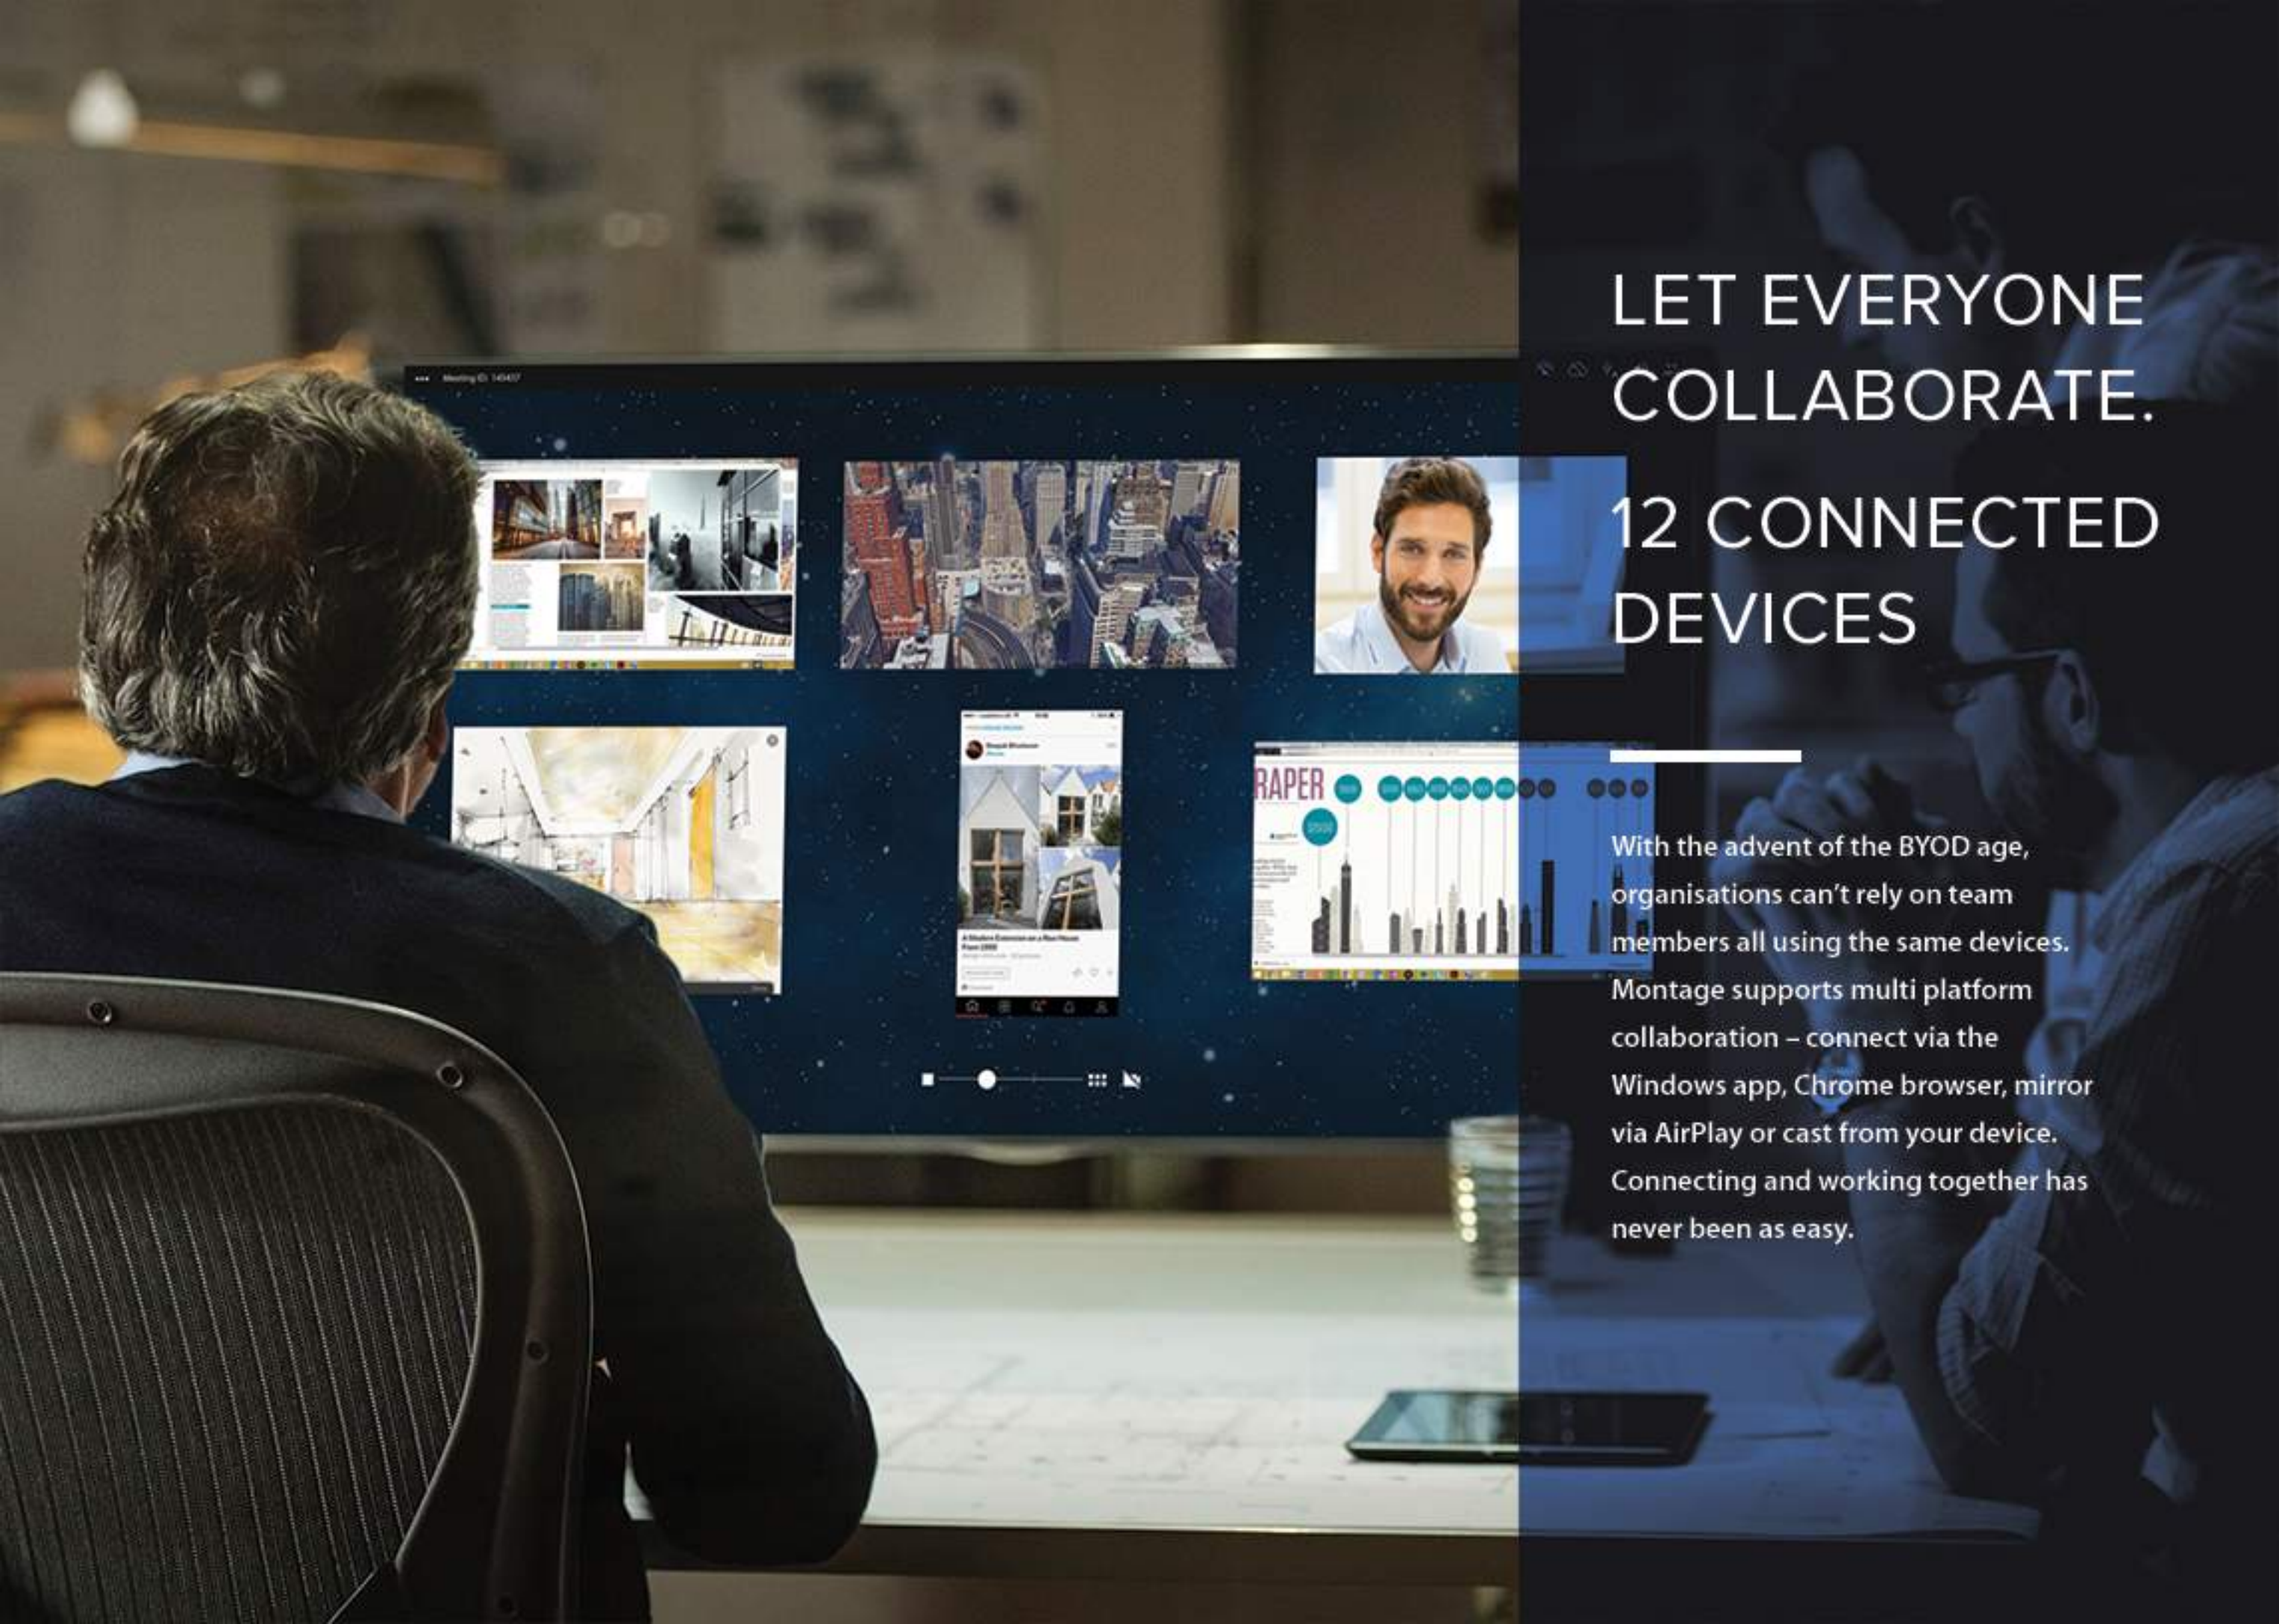

Montage makes external contributions easy, immersive and fully collaborative – why travel to be at a meeting when you can just connect remotely, saving time and money, with the same outcomes. All attendees can see and be seen, wherever in the world they are – remote attendees can be at optimal productivity levels by presenting content, sharing their screen and be seen and heard whilst also seeing and hearing what others are presenting with 2 way voice and video support. Wherever you are, joining a meeting and sharing what's on your device with Montage is no longer a disruptive event.

KEEP EVERYONE ON THE SAME PAGE

Wouldn't it be great if you could avoid misunderstanding and misinterpretation...

Everyone can show their content to substantiate and clarify their points and annotate on their content for emphasis and explanation – never be in a situation where you see the content but miss the context. Communication and collaboration is more than just seeing and hearing, with Montage all attendees can manage content together from wherever they are – annotate, analyse, share and compare, discuss and develop. Don't wait until later to email meeting outcomes, when the meeting's done, the meeting should be done – send files, screenshots, minutes and updated content instantly to attendees.

LET EVERYONE COLLABORATE.

12 CONNECTED DEVICES

With the advent of the BYOD age, organisations can't rely on team members all using the same devices. Montage supports multi platform collaboration – connect via the Windows app, Chrome browser, mirror via AirPlay or cast from your device. Connecting and working together has never been as easy.

MEET **SMARTER**
SEE **CLEARER**
DECIDE **BETTER**

MAKE INFORMED DECISIONS & REACH QUICKER CONCLUSIONS

Wouldn't it be great if information gaps in meetings could be identified easier…

The more you achieve in a meeting, the less meetings you'll need to have - by bringing all required contributors to the meeting and having all information available and visible enables much more informed decision making. Montage allows you to easily identify information gaps by reordering and rearranging attendee's devices and content so you can easily view, compare and analyse information from multiple sources.

SECURITY, PRIVACY & PEACE OF MIND

Wouldn't it be great if you could be completely confident that your meeting room technology was secure…

Full enterprise level encryption for all attendees, whether across the room or across the world, with password & PIN, 2048 bit asymmetric cryptography and a 256 bit symmetric session key. Attendees can choose to display either their entire primary or secondary screen or a single application or window as required – with 'Pause Screen' available for an extra layer of privacy. Your information is a business asset – protecting it is absolutely vital and with Montage you can rest assured that all your video, audio and data is secure.

REDUCE ADDITIONAL PRODUCT DEPENDENCIES

Wouldn't it be great if there was one solution that united all meeting room productivity needs…

Montage does away with the need for a separate suite of tools requiring IT resources, licensing and maintenance, such as file sharing tools, telepresence devices, screen sharing technologies, annotation software. Montage combines these into one cost effective meeting productivity solution. Thanks to its gesture optimization, it enables users to make the most of their existing touch screen display investments.

"COMMUNICATION BETWEEN GROUPS OF PEOPLE IS MOST EFFECTIVE WHEN PARTICIPANTS ARE ENGAGED, AND THE DISCUSSION IS BOTH INCLUSIVE AND COLLABORATIVE."

HBR: Create a Conversation, Not a Presentation. John Coleman, 2015

"Modern organisations want to communicate work-related information within the context of the activity."

ForresterVendor Landscape: Collaborative Work Management for the Enterprise.
Margo Visitacion et al, August 2015

"Tools that easily enable remote collaboration will sweep through the enterprise."

A Crisis Of Attention: Technology, Productivity, And Flow. Using The Science Of Knowledge Work To Restore Flow To The Workplace.
David K Johnson et al Forrester Reports, July 2014

"Collaboration Improves Concept Performance... teams of six or more people generate concepts that perform 58% better."

TECHNICAL SPECIFICATIONS

CPU	Intel® processor
System	Linux®
RAM	4GB
Storage	Intel® HD Graphics
GPU	Dual-band WiFi & Gigabit LAN
Connections	
- USB	4 x USB 3.0 (2 x front, 2 x rear)
- Audio	3.5mm TRS mini phone jack
- HDMI	1 x mini-HDMI (Type C) female
- DVI	1 x mini-DVI port
- LAN	8-wire RJ5, female; 10Base-T/ 100Base-TX ethernet port
- Power	Output: 3.5 Amps @ 12V DC Input: 1.2 Amps (max) @ 100-240 V AC, 50/60 Hz
- Security	Hardware lock
Connectivity	Integrated wireless access pont
	Unique meeting ID
	Optional pin for added security
Voice & Video	VoIP & video over LAN and internet
	Video runs 30 FPS (typical)
Client Connections	Windows® application, Chrome® browser, AirPlay® & Miracast®
