DESCRIPTION

The Extron **DTP DP 4K 330** is a long distance transmitter and receiver set for sending DisplayPort, audio, and bidirectional RS-232 and IR signals up to 330 feet (100 meters) over a shielded CATx cable to Extron DTP™ 330-enabled products. It provides an effective means of incorporating higher resolution DisplayPort signals with embedded audio into DTP Systems. The DTP DP 4K 330 accepts analog stereo audio signals for simultaneous transmission over the same shielded twisted pair cable. It supports video signals at resolutions up to 4K, including 2560x1600 and 1080p/60 Deep Color. DDC communication of EDID and HDCP is continuously maintained between a source and display, ensuring direct compatibility and optimal signal transmission between devices.

For installation flexibility, the DTP DP 4K 330 transmitter or receiver can be remotely powered over the shielded twisted pair cable by a DTP 330-enabled product. The twisted pair extender also supports simultaneous transmission of bidirectional RS-232 and IR signals from a control system for AV device control. The receiver supports Type 2 dual-mode DisplayPort for HDMI, 4K-capable devices. The transmitter offers an HDBaseT output mode for sending digital video and embedded audio, plus bidirectional control signals to any HDBaseT-enabled display. The DTP DP 4K 330 can be integrated with an Extron DTP CrossPoint® 84 Presentation Matrix Switcher, or other DTP 330-enabled products to support sources, plus displays and other output devices at remote locations.
